Current student profile

EARLY-COLLEGE ADVISING / PUBLIC-SOURCE CASE

Junzhe (Calvin) Yang

University of California, Irvine | BSc Computer Science and Engineering
Expected graduation: June 2030. The portfolio identifies him as a current UCI student. The exact year of study is not explicitly confirmed; do not label him a verified freshman. [C1-C2]

Reported background

The resume lists Java, Python, C/C++, JavaScript and HTML/CSS, together with engineering design and software-testing tools. It describes an Arduino sensor-monitoring project, Python numerical-simulation work, engineering project assistance and team-based rocketry activity. These are author-reported experiences, not a formal assessment of proficiency. [C1]

Projects and stated interests

The portfolio focuses on embedded systems, electronics, firmware and simulation, and states openness to internships, UCI student teams and research opportunities. The linked GitHub profile describes an interest in strengthening C/C++ and finding undergraduate research or engineering project teams. These are useful starting goals for an advisor, rather than evidence of a skill deficit. [C2-C3]

Possible advisor next steps - proposed, not diagnosed

1. Ask whether the priority is embedded-software internships, a campus project team or research.
2. Choose a benign sensor-monitoring project milestone, with clear tests and documentation, to build on existing work.
3. Assess relevant C/C++ and numerical-programming skills before assigning learning resources; use the results to set a realistic short-term plan.

Available: Resume, portfolio, engineering project descriptions, GitHub and LinkedIn links.
Not found in reviewed sources: Named college courses, full admissions application, transcript, assessment history or study logs.
Unknown: Exact class year, current course load and learning pace. LinkedIn contents were not inspected.
