Current student profile

EARLY-COLLEGE ADVISING / PUBLIC-SOURCE CASE

Chan Ryu

Singapore Management University | BSc Computer Science
Listed study dates: August 2026 - August 2030. This fits a first-year undergraduate in October 2026, based on the resume dates; enrollment is self-reported, not independently confirmed. [R1]

Reported background

The resume lists a prior Applied AI diploma at Temasek Polytechnic (2021-2024), research-assistant experience at A*STAR, and product-operations work at DOTC. It describes work with machine learning, information extraction, retrieval-augmented generation and software quality checks. Listed programming languages include Python, Kotlin, JavaScript and Java. Prior technical experience should not be confused with seniority in the current degree. [R1]

Projects and stated interests

The portfolio links TraceGlow, a personal activity-heatmap tool, and TypeSense, a typing-practice and analytics platform. It also describes a hackathon legal-information app. The author states an interest in software-engineering internships, AI/product engineering and hackathon collaborations. Resume, GitHub and LinkedIn are linked from the same portfolio. [R2]

Possible advisor next steps - proposed, not diagnosed

1. Ask which direction matters most this semester: software engineering, applied AI or product engineering.
2. Review one existing project for testing, evaluation and documentation, then agree on one achievable improvement.
3. Use a short assessment to check relevant foundations before proposing a learning plan; do not infer mastery from the resume.

Available: Resume, portfolio, project descriptions, GitHub and LinkedIn links.
Not found in reviewed sources: Named SMU courses, completed college application, transcript, assessment history or study logs.
Unknown: Current course load, time budget and demonstrated skill mastery. LinkedIn contents were not inspected.
