HISTORICAL BERKELEY PROFILE

Jonathan Tien

The public resume lists a B.A. in Computer Science at UC Berkeley, Fall 2008 to Spring 2012. Use this as a historical student-era record, not a current student profile. [J1]

Resume summary

The resume describes product-management, software-engineering and design experience. It lists an internship at Glassdoor in 2012, an internship at Tribal Technologies in 2011, and product work at Endoppler / Crumbs in 2010-2011. Projects include an internal attendance-system rewrite and CalChat, a Berkeley chat application. [J1]

Reported coursework

Undergraduate: Algorithms, Artificial Intelligence, Computer Security, Operating Systems, Software Engineering, and User Interface Design.
Listed as graduate coursework: Computer-Based Communications Systems and Networks, Database Management, Interface Aesthetics, User Interface Design and Development, Web Architecture, and XML Foundations. These are self-reported course titles, not a transcript or evidence of a graduate degree. [J1]

Projects and applications built

The work page connects the same portfolio identity to CalChat, Blind.ly Messenger, Crumbs and other projects. It describes Blind.ly as an Android messaging project from a Software Engineering / CS169 class, with repository and presentation links. CalChat is described as a collaborative Berkeley competition project. Here, "applications built" means software projects, not college admissions applications. [J3]

Missing: No full college application, transcript, assessment history or study log was found in the reviewed sources.
Record boundary: Do not combine these historical student-era claims with present-day career information and label the result a current college student.
